Re: Budapest August 2006

Subject: Re: Budapest August 2006
From: "Zdirad Zak" <zak@chemi.muni.cz>
Date: Thu, 20 Oct 2005 14:53:14 +0200
To: "Alfred Bader Fine Arts" <baderfa@execpc.com>

Dear Dr. Bader,
thank you for your reply. It is a pity you are not free. The main prize for the best poster is donated by Sigma-Aldrich company and we thought that it would be nice if the founder of this company could preset it. I am very sorry and ashamed that I did not get the idea last year - this year's conference was held in Brno. However, in case there is a change in your plans and you could find the time to present the prize, just let me know. It can be easily arranged. With best wishes,
Zdirad Zak

Dear Dr. Zak,

Unfortunately I am not available in August of 2006 to address your group. Thank you for thinking of me.

Best regards,
Alfred Bader

Milwaukee, Wisconsin 53202

Dear Dr. Bader:

It was a very pleasant meeting with you at the SIUE seminar early this year. As a graduate student in the Chemistry Dept., I attended your speeches and the roundtable talk. I was the Chinese girl who initiated the business topic about China during the roundtable talk, since I used to be an international sales representative in a major chemical trading company in China. You may recall that we talked about the big changes and opportunities in China. As you suggested, I collected and enclosed some lists of the exporting chemicals from several Chinese companies. To let you understand my background better, I also enclosed a copy of my resume for your review.

With my many years' experiences in the chemical im/export business in China, I have extensive networks with manufacturers and trading companies around China. The enclosed catalogs may not match your needs. However, if you could give me a list of products you need, I can find the specific products and manufacturers for you.

I am very excited by the current changes in China. With the world's largest population and fastest growing economy, China has become the growth engine of the Asian and world economy, and with its ever accelerating pace of domestic market liberalization and sustained surge of foreign investment, China is expected to become the world's largest market within the next decade. There is also great growing potential in the specialty chemical market in China. There are many chemical manufacturers but no such efficient distribution channels in China as in the U.S. I noticed that several foreign companies have become involved in the business of specialty chemicals in China. Does your company have intention to expand the business in China?

I am very interested in the business of import/export of chemicals. I hope my talent and skills can be utilized in the US. Could you please give me some advice? I would appreciate it if you could give me a reply in your convenient time. I look forward to hearing from you. Thank you for your time.

Sincerely yours,

Ruohua Zeng

1921

1921

1921

1921

The first part of the report deals with the general situation of the country in 1921. It is a year of transition, a year of reconstruction. The war has ended, but the country is still in a state of chaos. The government is weak, the economy is in a state of collapse, and the people are suffering. The report describes the various problems that the country is facing and the steps that are being taken to deal with them.

The second part of the report deals with the financial situation of the country. It discusses the state of the treasury, the public debt, and the money supply. It also discusses the various measures that are being taken to stabilize the financial situation and to restore confidence in the currency.

The third part of the report deals with the social and economic situation of the country. It discusses the state of the labor market, the distribution of income, and the various social problems that are being faced by the people. It also discusses the various measures that are being taken to improve the social and economic situation and to provide relief to the people.

The fourth part of the report deals with the foreign relations of the country. It discusses the country's position in the world, its relations with the major powers, and the various international agreements that it has entered into. It also discusses the various measures that are being taken to improve the country's foreign relations and to secure its interests in the world.

A Chemist Helping Chemists

August 30, 1996

Ms. Ruohua Zeng
411 Quince Street
Edwardsville, IL 62025

Dear Ms. Zeng:

Your interesting letter of August 27th reminded Isabel and me of our happy days in Edwardsville last April.

With your considerable experience and Sigma-Aldrich's interest in expanding in China, perhaps you should talk to key people in the company, and I am taking the liberty of sending a copy of your letter to Dr. Clinton Lane, the executive vice president of Aldrich in Milwaukee.

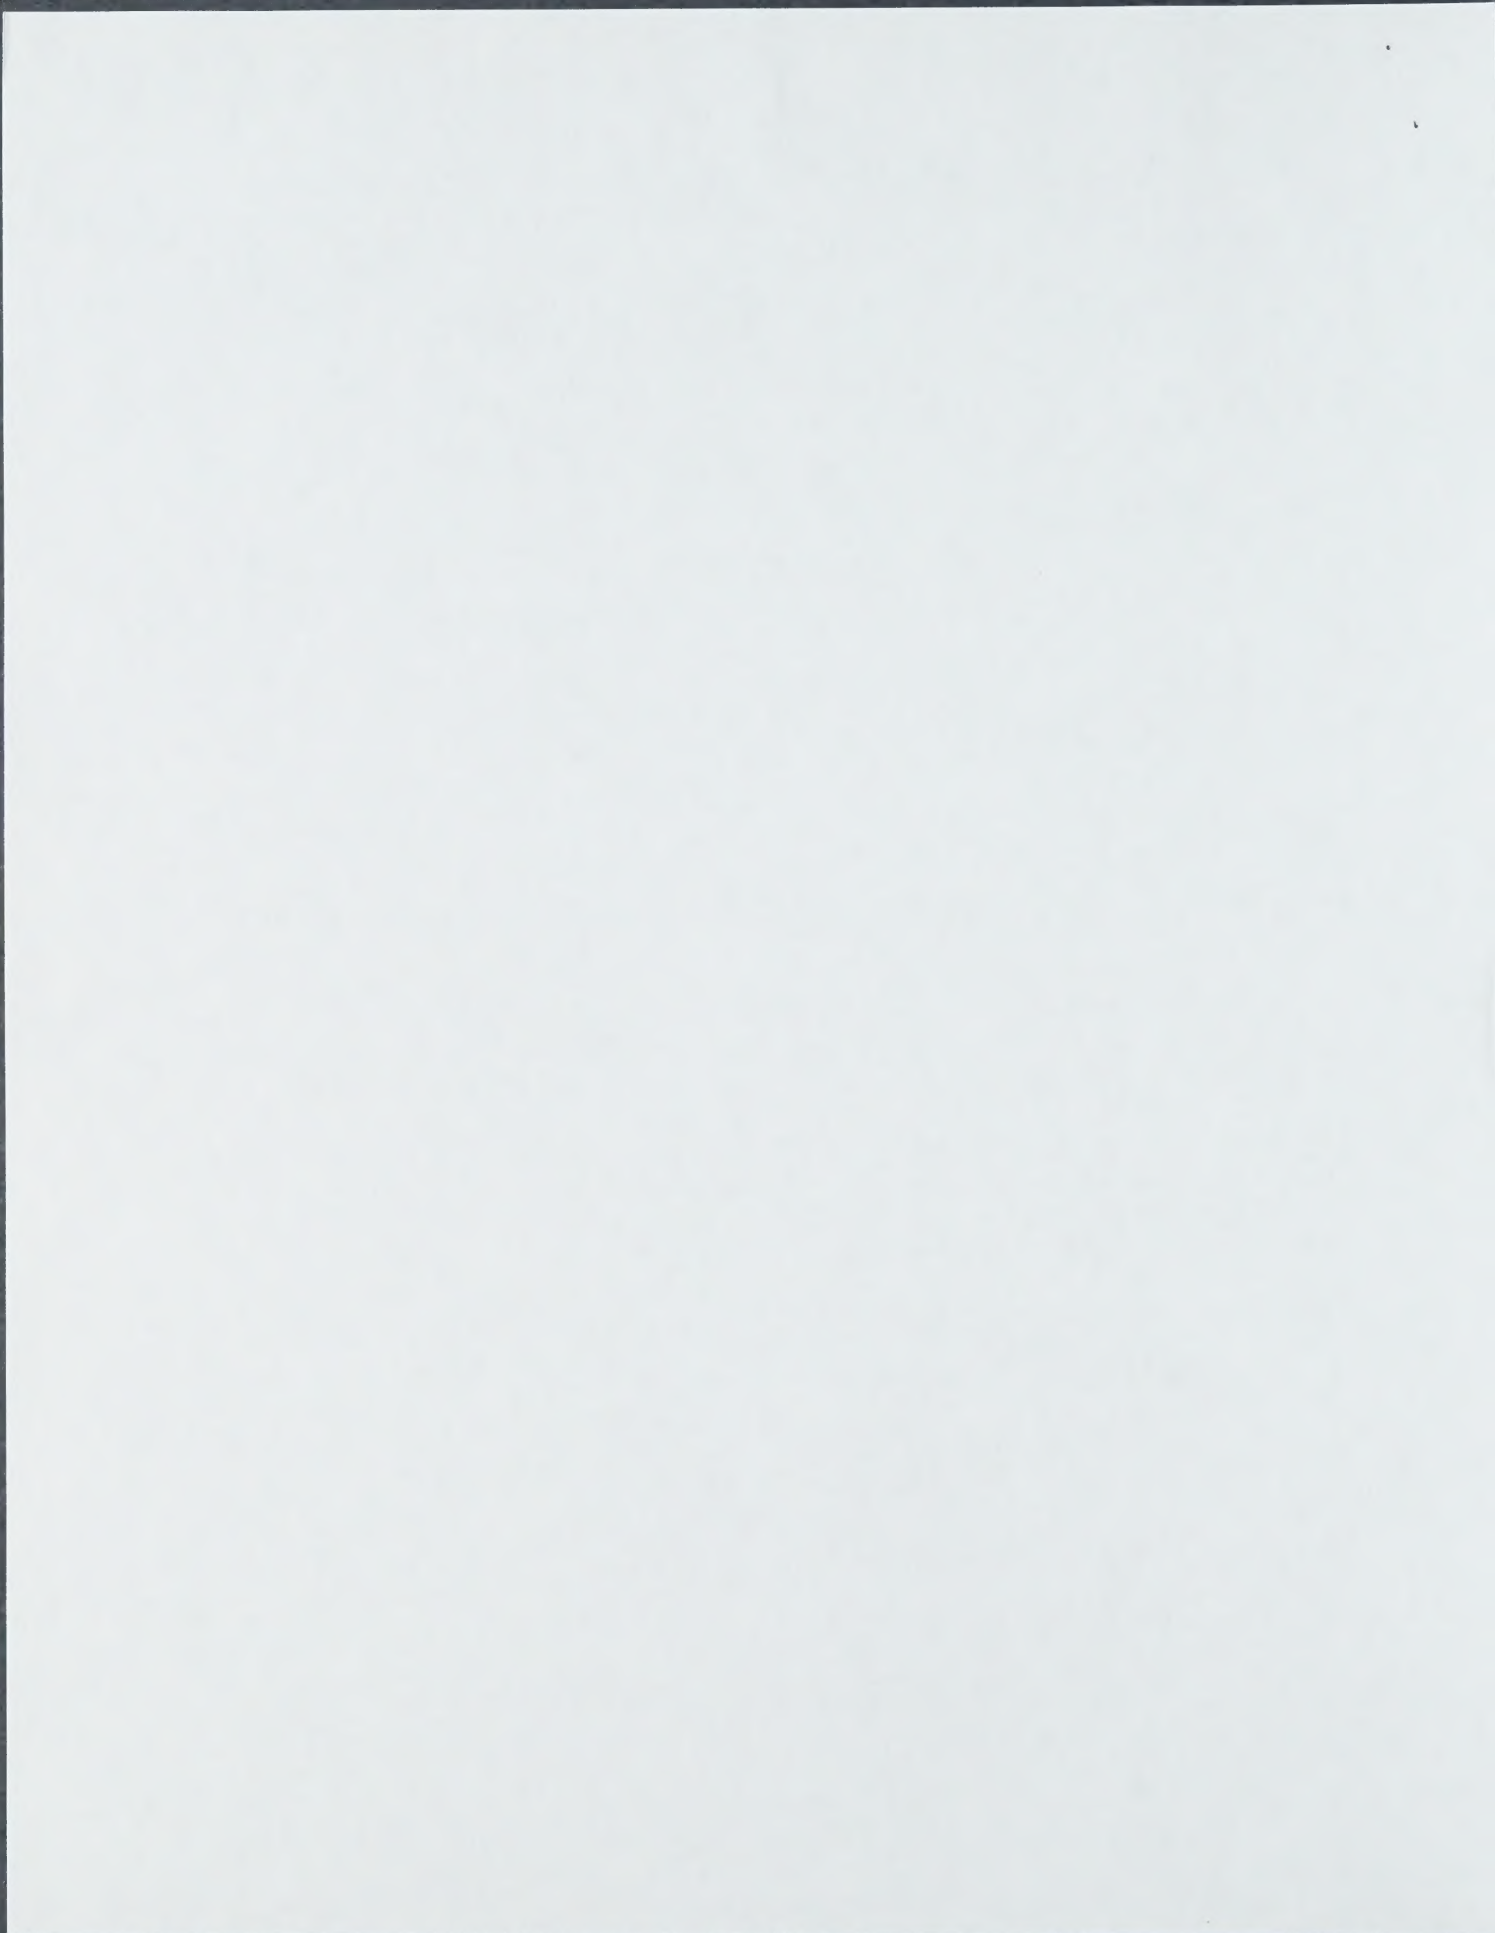

Thank you also for sending me the several lists of products. I am sure that you realize that the great majority of these products are very common chemicals where high freight charges would make importation impractical. But there are a number of products of specific interest, and Aldrich may be interested in these.

With all good wishes, I remain,

Yours sincerely,

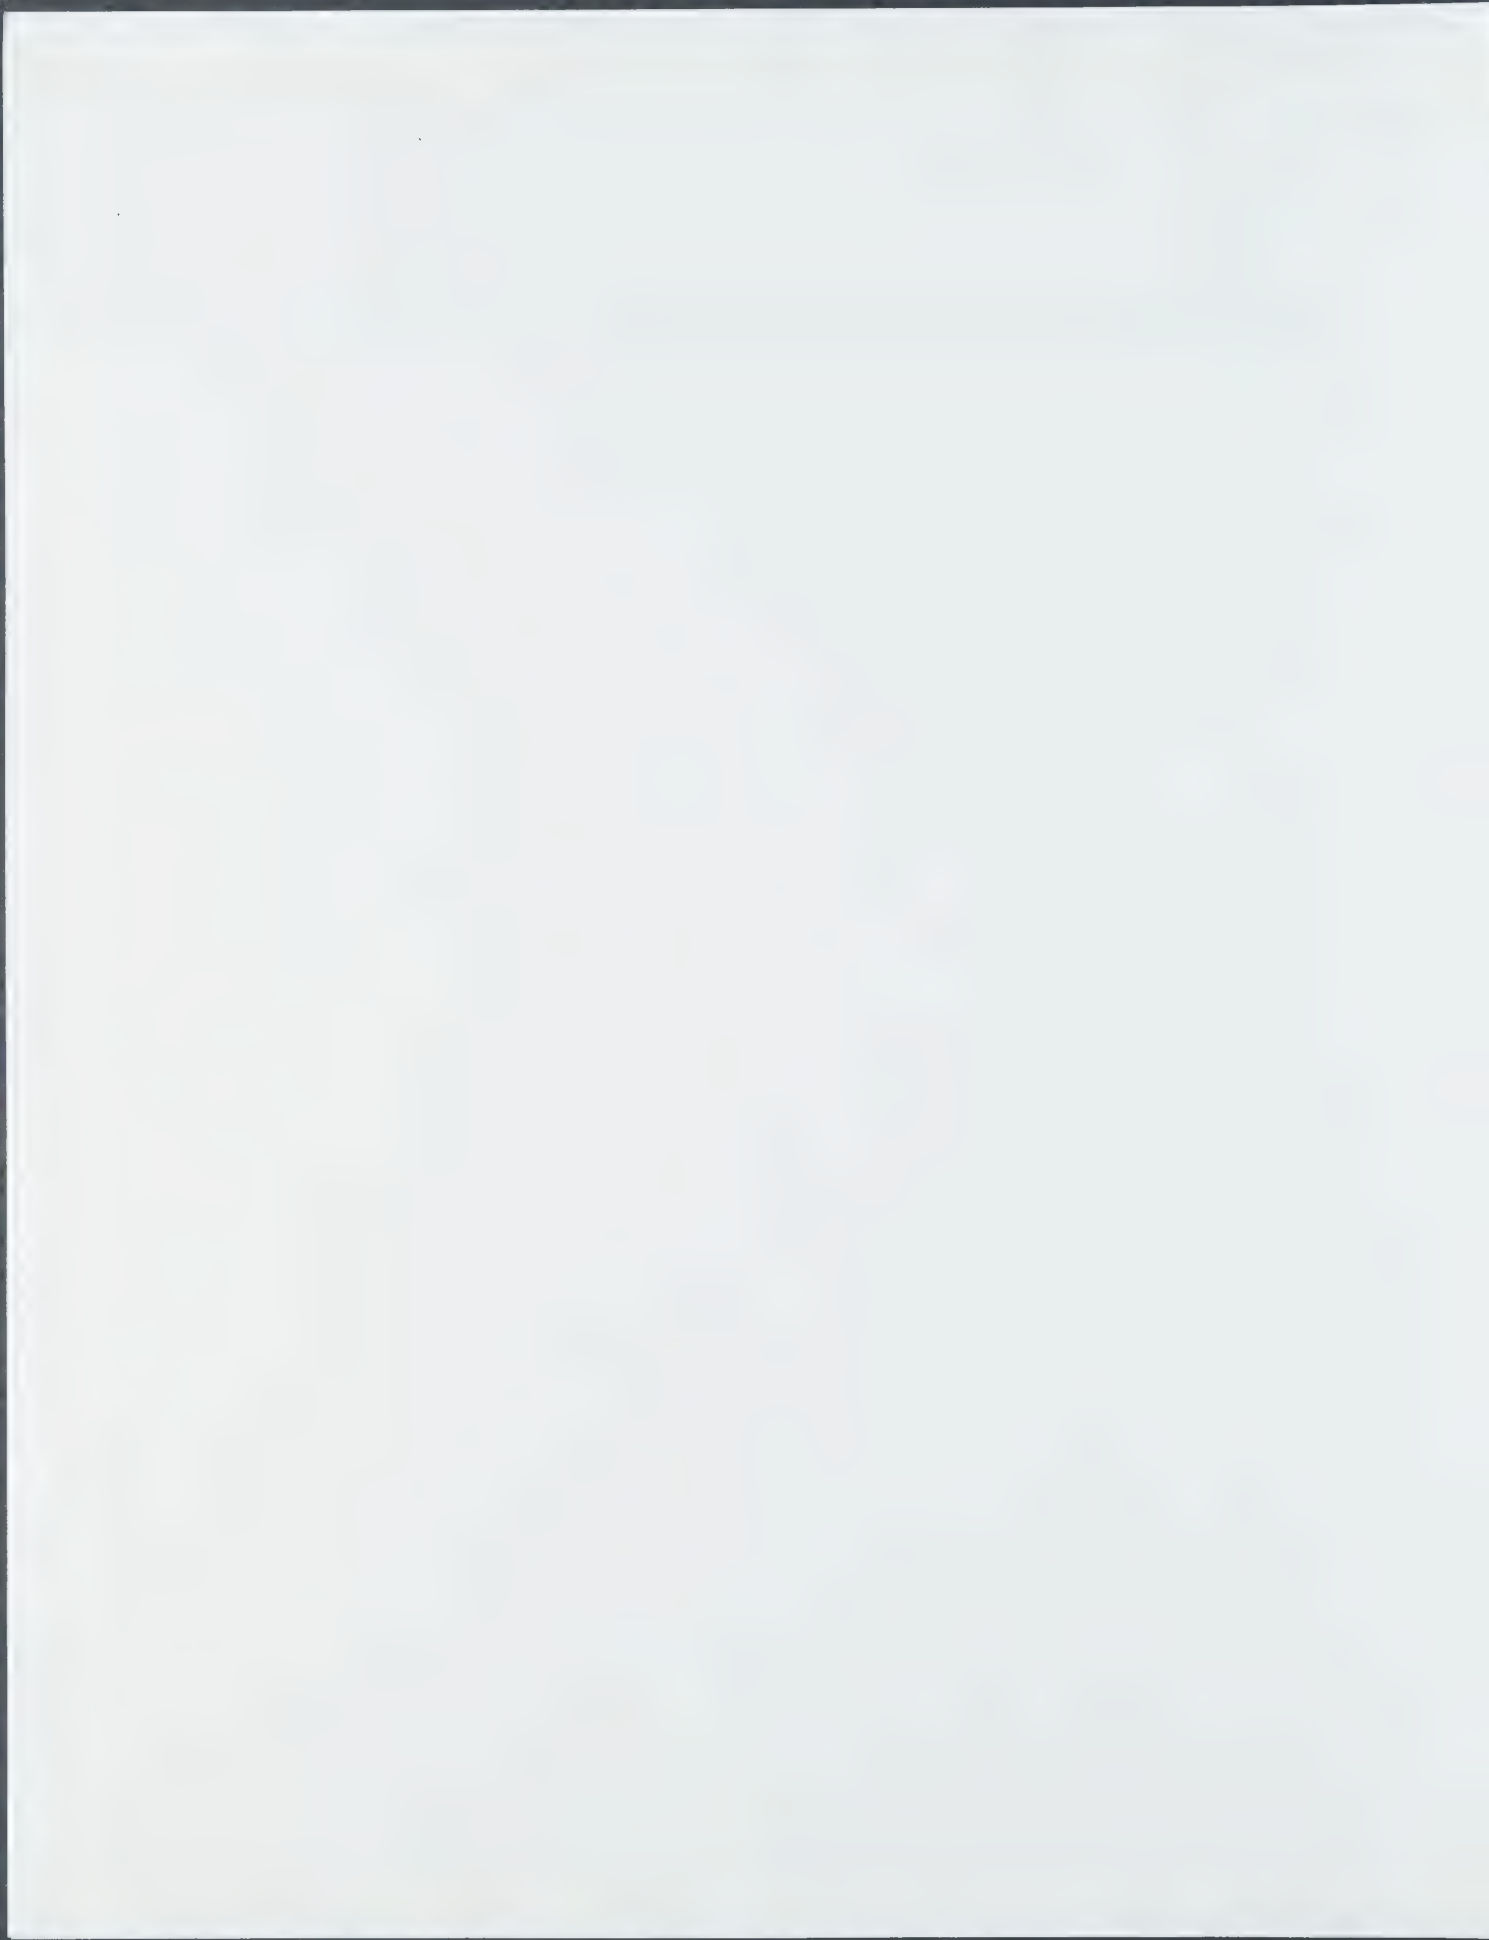

AB/cw

c: Dr. Clinton Lane

P.S. to Clint:

The lists are very bulky, and if you think they might be of interest, stop by the gallery for a cup of coffee or a drink on your way home and pick them up.

Dear Alfred:

I have just finished reading your book which I have enclosed herein. I would greatly appreciate your signing it for me. (I have enclosed a return label and hopefully sufficient postage.)

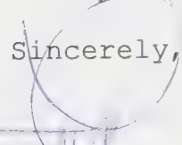

I thoroughly enjoyed the book and am honored to say I had the privilege to know and work (although short) with you. The things you have done in your life are inspirational, and I believe as more chemists and lay people for that matter get to know you through your book they and the world will be better for it.

I do recall the few times we spent together Isabel, you and me. Two in particular come to mind; at Philadelphia Airport when Isabel and you insisted on helping me find my plane to Islip and waited with me until it left, our lovely dinner at the Rascal House in Miami Roberta, Isabel, Barry, you and me.

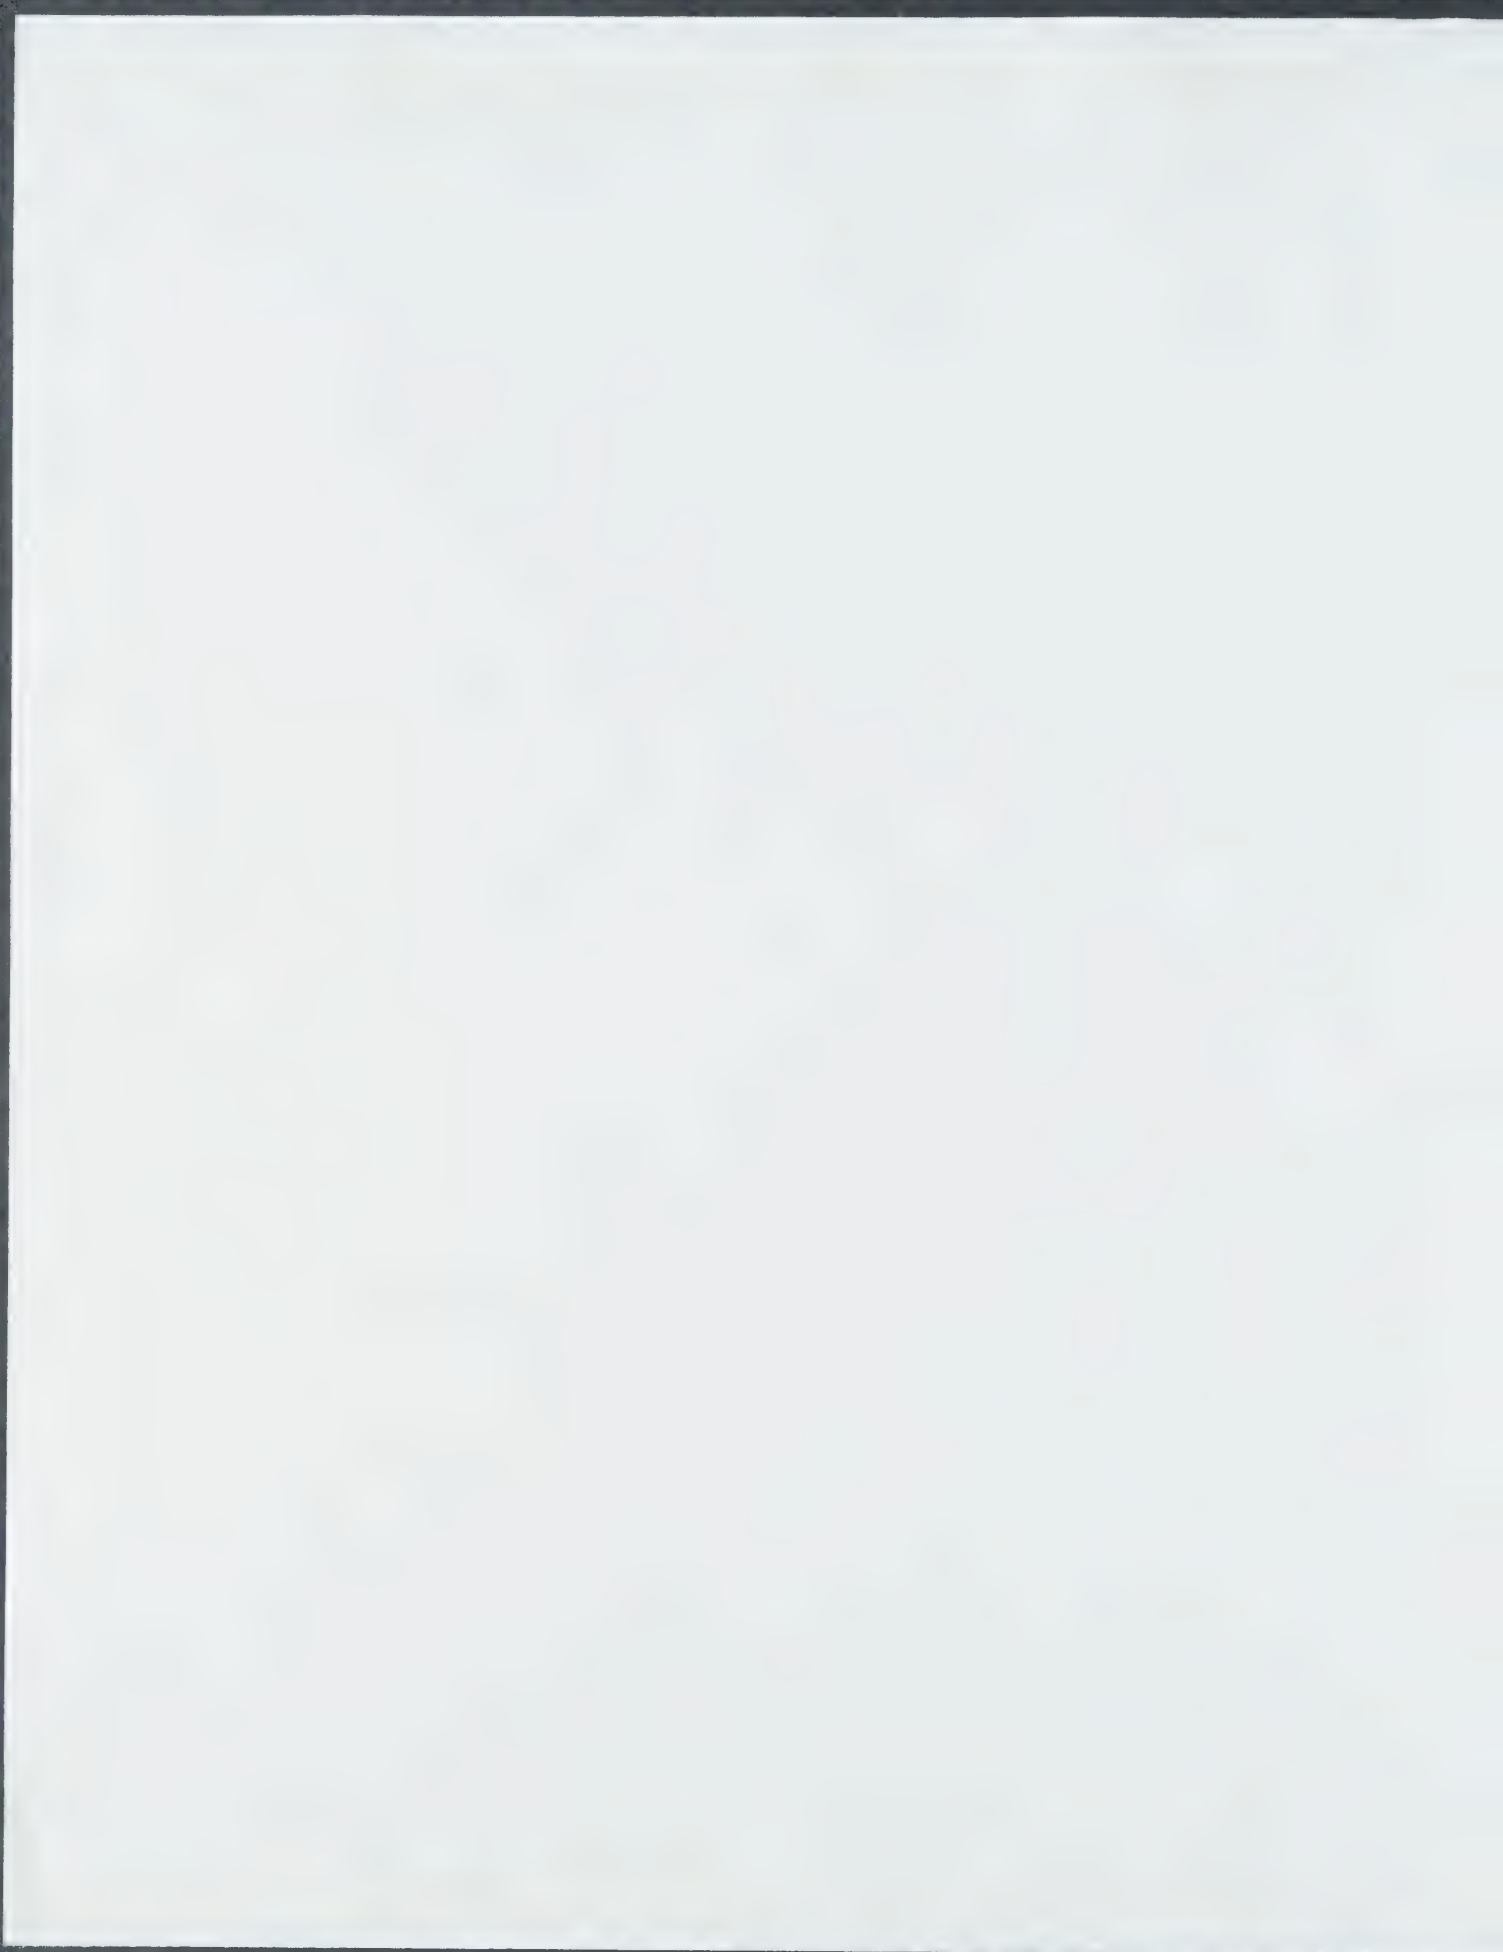

I wish you and your beautiful family all the best especially your new granddaughter; as Roberta and I revel in the same joy. Jodi had a baby girl last July (picture enclosed, like a typical grandfather I'm never without). The beauty of this is Allison Elysia is named for Roberta's father and my mother (a beautiful Jewish tradition). Every time I see Allison I am reminded of my mother.

Thank you for your support during my tenure in this business. I do hope our paths will cross again.

Sincerely,

Fred Zucker
President

Dear Alfred

Just to thank you for visiting us and for your gift of the prints from your collection. Of course any contacts you could make for us would be very welcome and we would be very happy if you wish to come back to check progress in the summer.

On the subject of vinylguaiacol it is apparently not in the Aldrich Flavours and Fragrances Catalogue but can be ordered as 2-methoxy 4-vinylphenol with the catalogue number W267511 and a nature identical status at a price of £3,5000 Kg⁻¹. Whereas our material would be truly natural and considerably cheaper. By comparison Lancaster offer £2,100 Kg⁻¹ for 97% pure material.

Very best wishes and thank you again for spending time with us.

Yours Sincerely

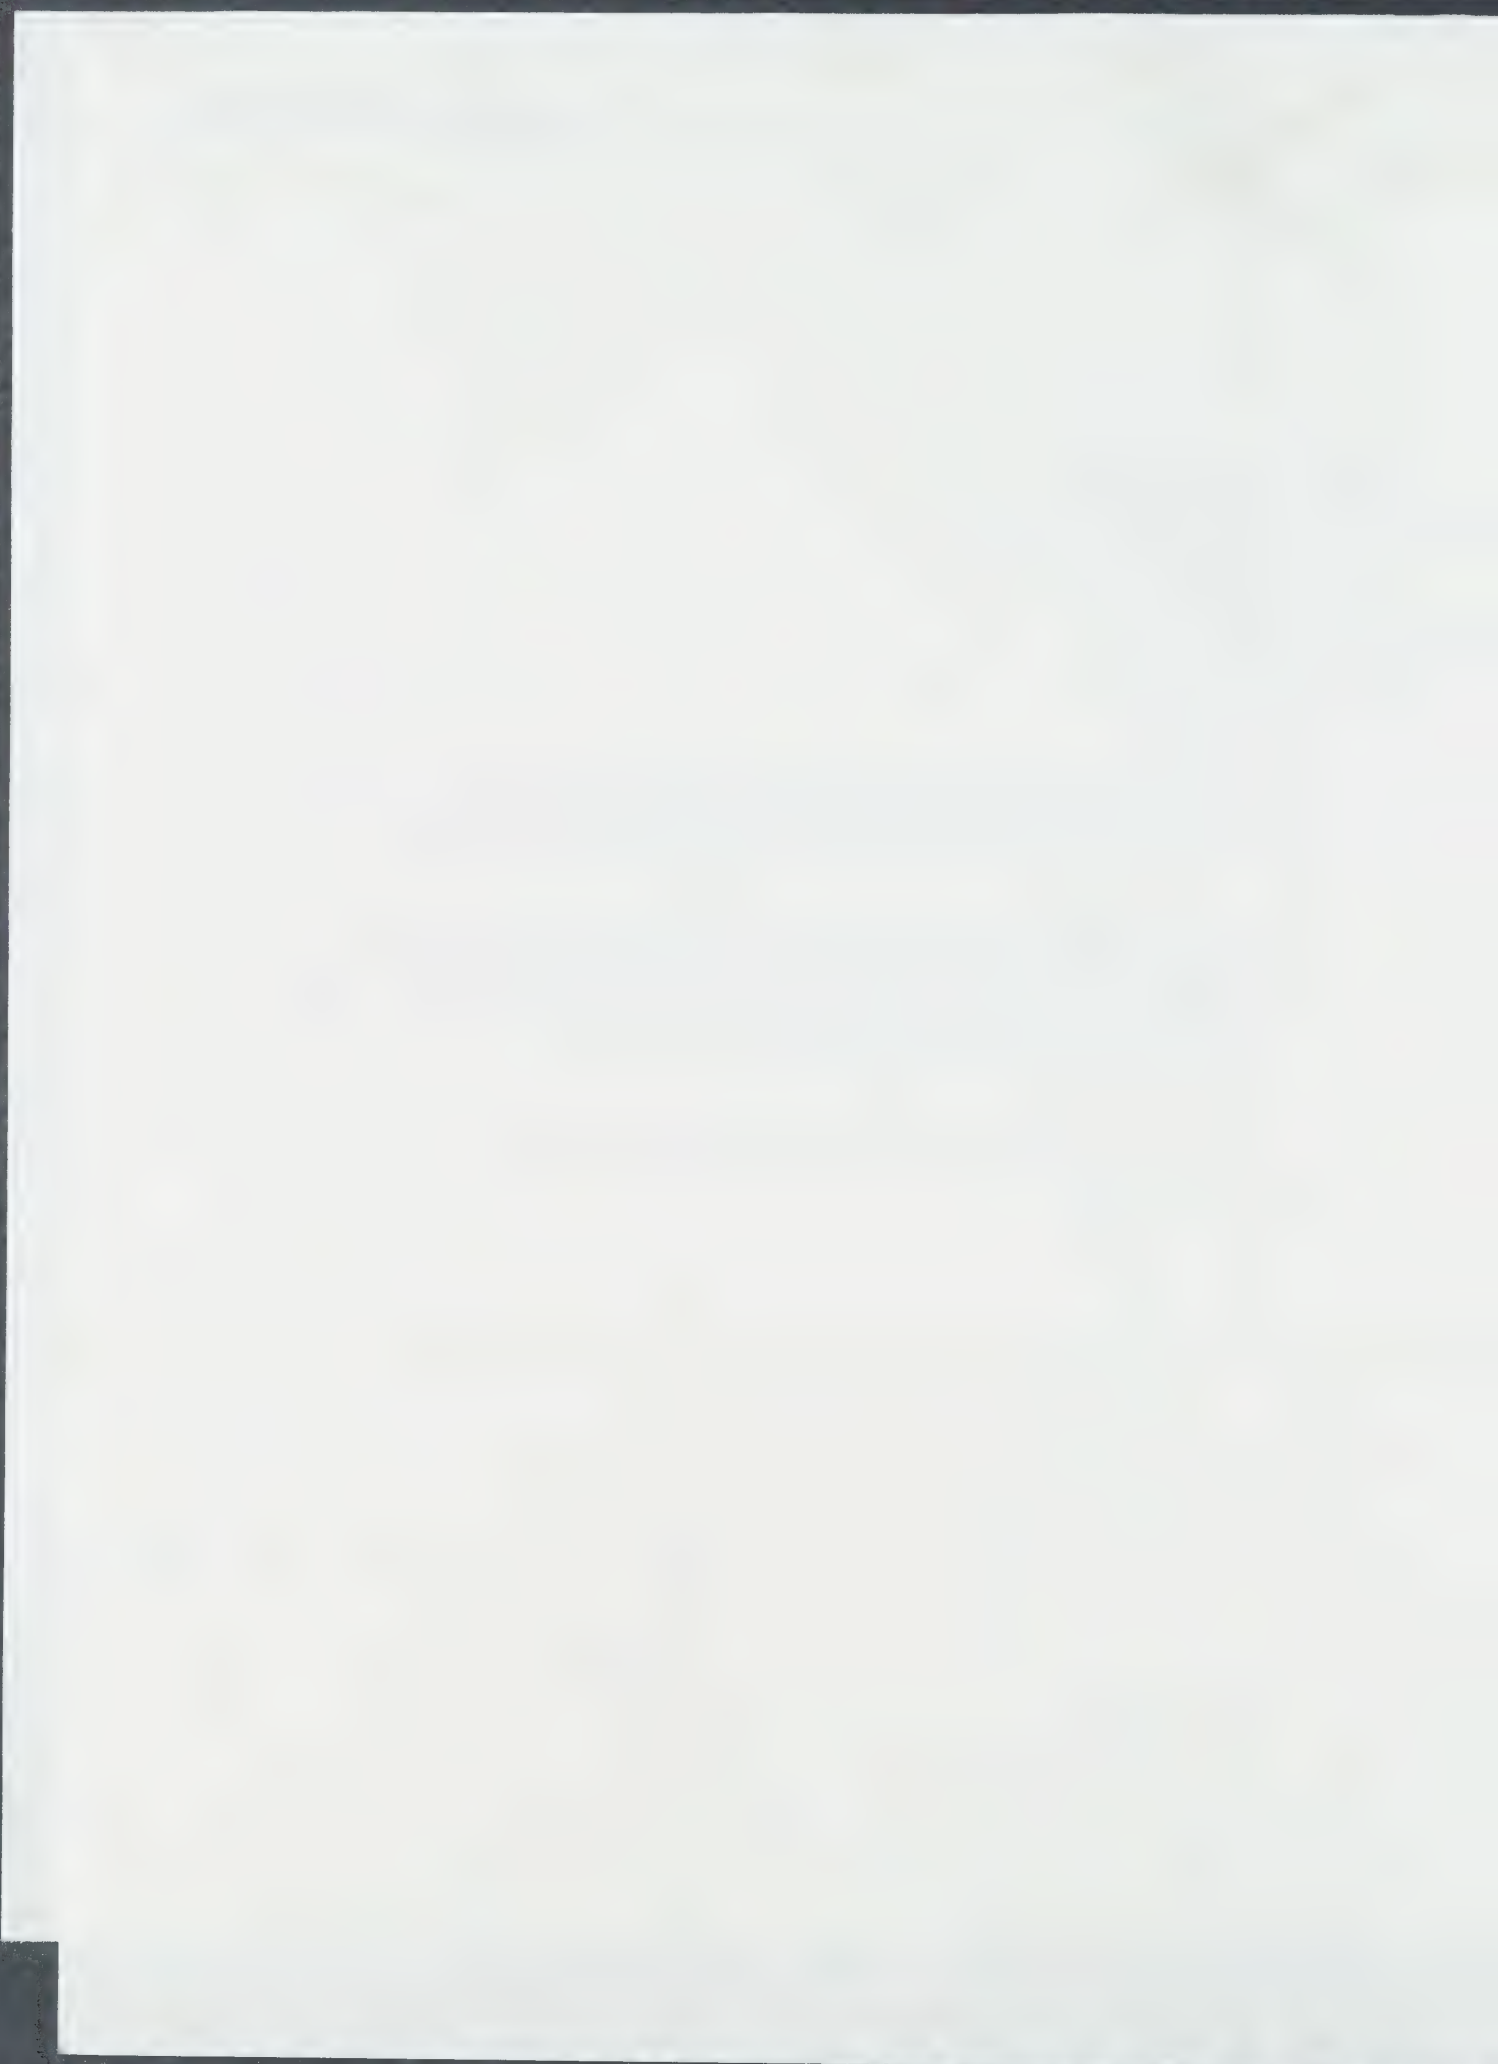

Dr Peter S J Cheetham

Dear Dr Bader

Thank-you so much for replying promptly to my inquiry, and for your suggestions. We will follow them up of course.

Yes, we would be absolutely delighted if you were able to find time to visit us at Zylepsis. The company is very small and very young but I am confident you will find something to interest and excite you here. Obviously we are not only aware of your home in England but also your passion for art. In this connection I would very much try to synchronise your visit with our current chairman, Alexander Korda, who is also an aficionado of paintings.

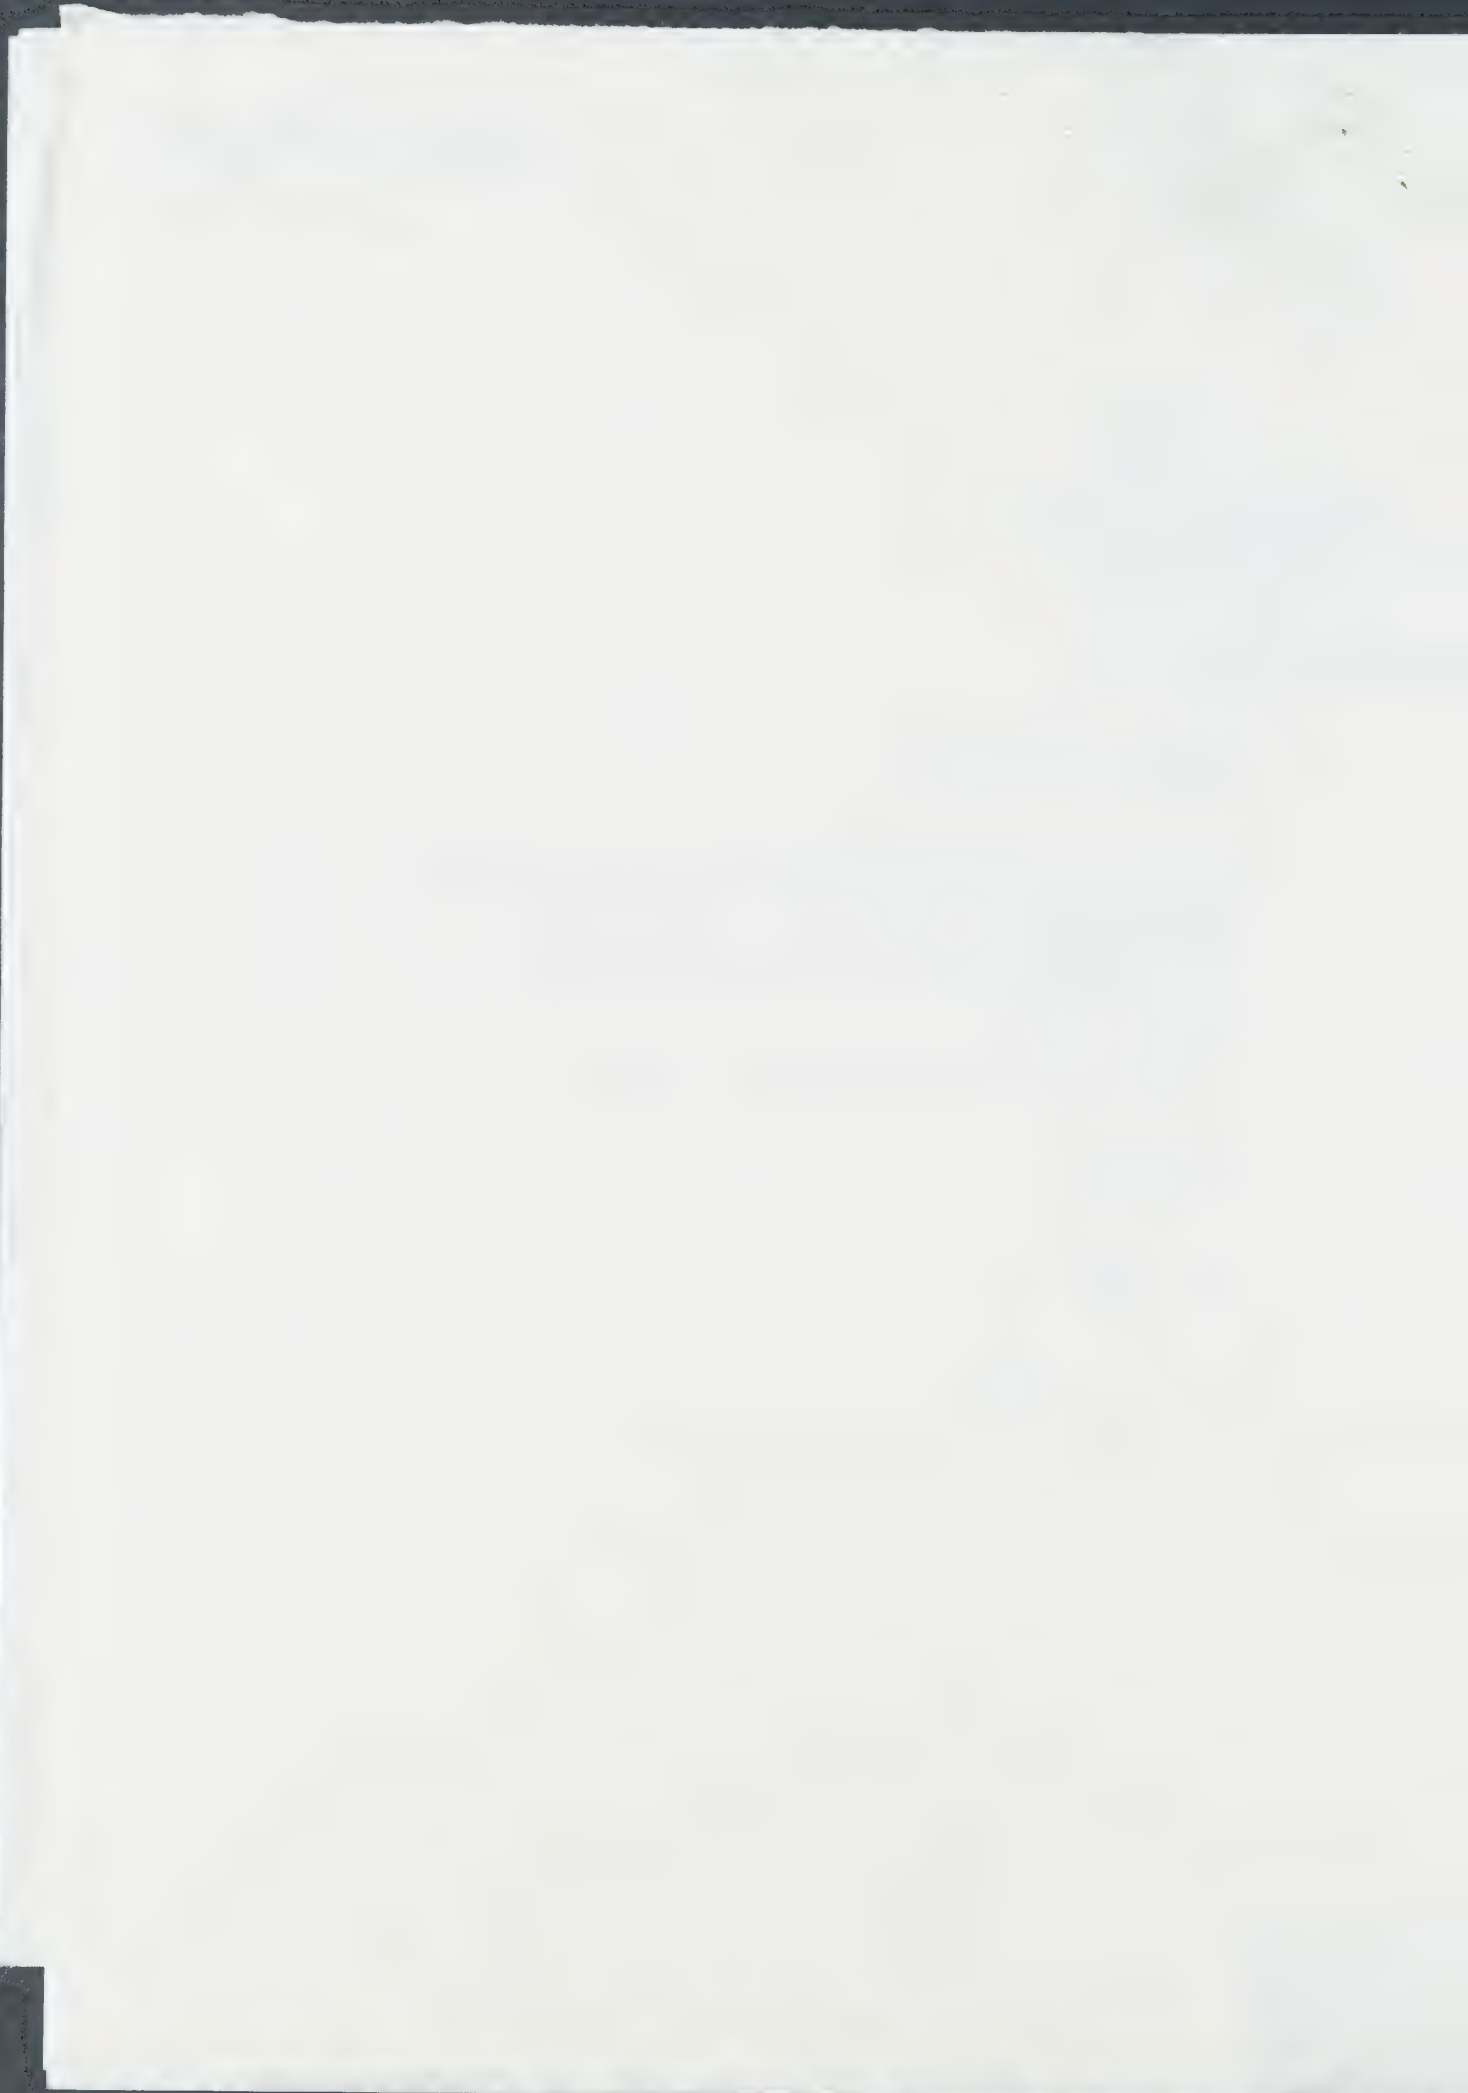

I will contact you about likely dates closer to November.

Yours Sincerely

P.P. Wirth

Dear Dr. Cheetham:

In response to your fax of today, I don't quite know why Frost - I presume, Dr. John Frost at Michigan State - has stated that I know how best to extract quinic acid from plants.

As you perhaps know, this is offered by the Aldrich Chemical Company, and years ago I used to purchase this from a company in Germany, which extracts all sorts of natural products from plants. The company is Bucher in Hamburg. In the United States, I would think that the Hauser Chemical Company in Boulder, Colorado might be very interested in extracting this on a commercial scale, but I have not asked them.

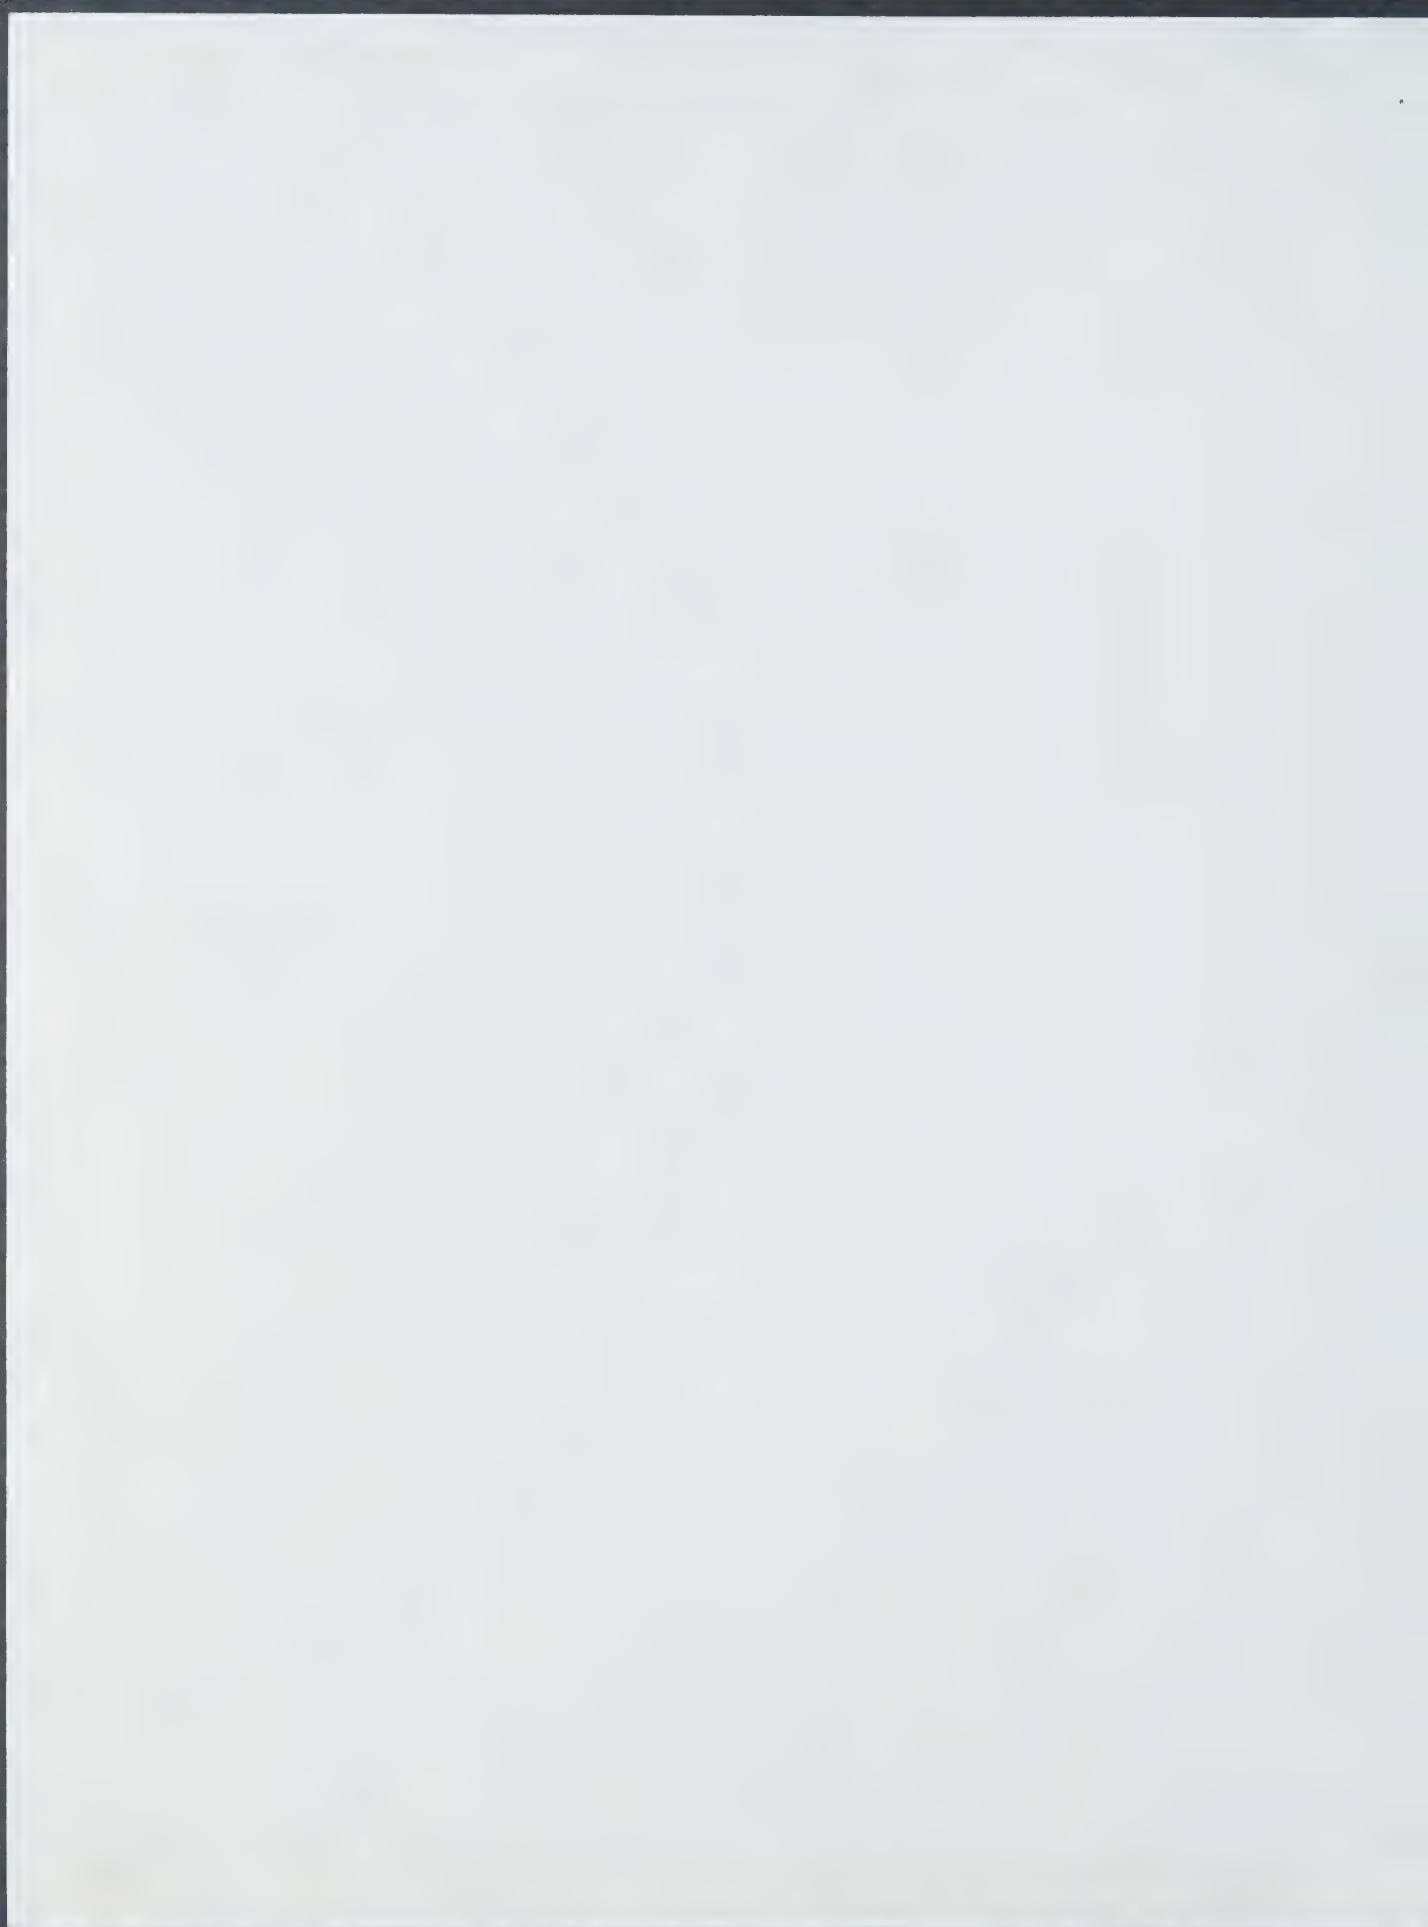

As you may know from my autobiography, my wife and I have a small home not very far from Ashford, namely in Bexhill in Sussex. We are usually there in November, December, June and July, and it would give me great pleasure if someday I could meet you personally.

With all good wishes, I remain,

Yours sincerely,

AB/cw

Dear Dr Bader

We are very interested in quinic acid as a rather unique organic chemical with several uses that have so far been rather neglected

We have noticed that you are quoted in the recent paper by Frost as a source of information on how best to extract quinic acid from (plant) raw materials and would be most interested indeed if you could also supply us with this information. For your interest here is a brief outline of the approach we are taking and the reasons for this.

Thank you for your help

Yours sincerely

ZYLEPSIS

ZYLEPSIS COMPANY OUTLINE

Zylepsis is a bioresearch company with the very distinct strategy of specialising in the discovery and development of key functional ingredients for foods, beverages, personal-care and other products utilising novel and proprietary biotransformations technology that offers unparalleled advantages over conventional technologies. As a result such key functional ingredients are made available at sufficiently low costs and in large enough quantities to enable their use in mass-market products, and at high in-product concentrations to maximise their functional benefits.

What is Zylepsis doing?

Since its establishment in October 1993, Zylepsis has rapidly demonstrated its ability to discover and develop new, cost effective and highly functional processes and materials with significant, quantitative and distinct competitive advantages over existing ingredients. For example Zylepsis has developed a range of novel, natural sunscreen materials with extra high performance for use in both sun-care and cosmetic products.

Why is Zylepsis unique?

Zylepsis is the only bioresearch company to work in this product area. Therefore a substantial opportunity has been created to focus on significant industry needs where Zylepsis' proprietary biotransformations expertise offers unparalleled advantages to discover and product qualitatively new ingredients with unique functional properties. This is particularly apparent where there are genuine needs for new or more precise bioreactions to give products with new functionalities. These include dual function ingredients, improved purities, lower costs, no supply problems, distinctive marketing advantages such as naturalness, and the circumvention of existing patent and monopoly positions etc. This generates current value ingredients at costs and in quantities suitable for mass-market products.

How does Zylepsis commercialise its technology?

Partnerships are important, especially on a shared risk-shared benefit basis. Zylepsis' expertise is making the new product discovery cycle as short and productive as possible by identifying and concentrating on precisely defined industry needs, and applying dedicated and highly skilled scientific teams. Then a Collaborative Partnership could be set-up with a company with complimentary manufacturing and marketing expertise based on a licensing or similar agreements.

ZYLEPSIS

ZYLEPSIS PATENTABLE PRODUCTS

Zylepsis has a portfolio of patentable projects for which we are seeking Partner Companies with manufacturing facilities and access to end-markets via established sales teams. Examples include:

- The first *natural* sunscreen materials with uv absorption properties comparable to existing industry standard materials
- Novel sunscreen materials which for the first time have combined uv A and B absorption and intensities much superior to existing materials etc.
- Nootkatone grapefruit flavour
- Biomelanins with superior solubility and reduced colour
- Xanthan with improved gel forming properties

RESEARCH PARTNERSHIPS

In order to bring additional products to market we seek Partner Companies to work with from an early stage through to market. Examples of our early stage projects include:

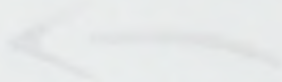

- Ceramides (key water-barrier ingredients for skin creams)
- Furaneol (a very important fruit and savoury flavour)
- Onion and garlic flavours

All together this is unique and compelling combination of technical expertise and industry opportunities that is accelerating the rate of new product and process discovery and commercialisation

ZYLEPIS

VALERIS PATENTABLE PRODUCTS

Zylepis has a portfolio of patentable projects for which we are seeking Partner Companies with manufacturing facilities and access to end-market for specialized water tanks. Examples include:

- The first natural sunscreen materials with UV absorption properties comparable to existing industry standard materials
- Novel sunscreen materials which for the first time have combined UV A and B absorption and intensifier much superior to existing materials etc
- Biodegradable synthetic flavonoid
- Biomaterials with superior solubility and reduced colour
- Xanthan with improved gel forming properties

RESEARCH PARTNERSHIPS

In order to bring additional products to market we seek Partner Companies to work with from an early stage through to market. Examples of our early stage projects include:

- A natural UVB water-soluble sunscreen for skin creams
- Flavonoid UVB absorber for sunscreens/flavonoids
- Green and white flavonoids

All projects that require high quality scientific expertise and industry opportunities that is accelerating the pace of new product and process discovery and commercialization.
