CABLE ADDRESS: ALDRICHAM

ALDRICH PURISSIMUM GRADE CHEMICALS

Besides a hundred reactive organic chemicals, the Aldrich Chemical Company is pleased to be able to offer a series of absolutely pure organics. Into this series are placed only chemicals which are difficult to obtain absolutely pure. It thus excludes all easily crystallized solids. The purity of these Aldrich Purissimum Grade chemicals is carefully checked by the determination of many physical constants, including UV and IR spectra, and to prevent oxidation, all are packed under nitrogen in 100 ml. bottles.

The following table lists some of the physical constants of these chemicals, and their cost per 100 ml.

OF SPECIAL INTEREST TO PERFUMERS

ALDRICH PURISSIMUM GRADE CHEMICALS

| | d ₂₀ 74° | n _D | Cost per 100 ml. |
|---------------------|---------------------|----------------|------------------|
| Benzal acetate | 1.0558 | 1.5025 | \$4.00 |
| Benzal citral | 1.5462 | 1.5402 | 3.00 |
| Cinnonalol | 0.8547 | 1.4567 | 3.64 |
| Cinnamol | 0.8778 | 1.4758 | 6.00 |
| Linalool | 0.8277 | 1.4624 | 8.00 |
| Phenylethyl alcohol | 1.0200 | 1.5331 | 5.00 |

When ordering these, please specify Aldrich Purissimum Grade

7th Annual Report, Sigma-Aldrich Corporation, Milwaukee, WI, 1977

Aldrich Chemical Company, Inc.

16 WEST WISCONSIN AVENUE
MILWAUKEE 5, WISCONSIN

BROADWAY 2-1820

Diisobutylaluminum-*n*-butylmagnesium for the preparation of Diisobutylaluminum is now being distributed by the Aldrich Chemical Company.

Diisobutylaluminum is an available reagent for the methylation of heterocyclic amides, ureas and imides, for the conversion of heterocyclic compounds and in the imidol-imidate reaction. It has also been prepared through intermediates which are available and existing with structure.

Diisobutylaluminum can now be prepared most simply by the action of diisobutyl on sodium diisobutylmagnesium. (J. Org. Chem. 32, 1772, 1773, 1967; et al., Ann. N.Y. Acad. Sci. 153, 1959); Organic Chemistry, Foster and Sawyer, 1967, Vol. 11, 178.

Diisobutylaluminum is a crystalline compound, m.p. 115°C, which has been found to be stable at 0°C temperature for over a year without decomposition. The addition of this crystalline compound to a solution of aluminum chloride in THF (1:1) (Aldrich) or diisobutylmagnesium (1:1) (Aldrich) in THF (1:1) (Aldrich) respectively have shown that when the diisobutylaluminum solution is prepared and added to an aluminum chloride solution of a pure carboxylic acid, the preparation of the resulting solution starts the analytical pure methyl ester of the acid.

Diisobutylaluminum-*n*-butylmagnesium Prices:

| | |
|----------|---------|
| 10 gms. | \$ 5.00 |
| 25 gms. | 12.00 |
| 100 gms. | 25.00 |

We will be pleased to receive your laboratory order.
